Irvine, CA • mintae3827@gmail.com • 949-735-4720 • [LinkedIn](#) • [GitHub](#) • [Website](#)

Server Engineer with 5+ years coding and 2+ years of production experience on a live MMORPG.

PROFESSIONAL EXPERIENCE

Funigloo — Game Server Developer [\[Notion\]](#)

Jan 2024 – Feb 2026

- Redesigned the broadcast cache architecture, raising single-map capacity from **250 to 600 players** and validating **50,000 concurrent players** in a single world.
- Built a **zone-partitioned threading model** across **10 worker threads** to remove shared-resource contention, and handled cross-server state sync through master-server routing and P2P UDP hole punching.
- Split the monolithic server into **6 microservices** (Auth, Game, Guild, Log, Control, GM) for fault isolation, independent deployment, and per-service scaling.

Freelance — Automation Software Engineer [\[GitHub1\]](#) [\[GitHub2\]](#)

Jan 2022 – Dec 2023

- Delivered Python/Selenium automation tools and PyQt desktop apps to **20+ paying clients**, covering scheduled data collection, web scraping, and transaction workflows.

PROJECTS

Last Ember — Unity Card Game [\[Steam\]](#)

Apr 2026 – June 2026

- Building a **roguelike card game in Unity** from scratch in about 3 weeks, using **AI-assisted development (Claude Code)** to build the card system, turn-based combat engine, deck composition, and reward/upgrade loops.
- Built and shipped the full release pipeline, from automated **build deployment** to a **save system**, and **live patch updates** post-launch.
- Launched on **Steam**, reaching **40+ sales** and **210 wishlists**.

Fastlane — AI Evaluation Platform [\[Website\]](#)

Jan 2026 – June 2026

- Built and shipped an **end-to-end AI proposal review platform** (Next.js, Supabase, OpenAI), owning full-stack architecture, schema design, and LLM orchestration.
- Designed a **3-pass LLM scoring pipeline** (Draft → Skeptic → Judge) with **α -based dispute routing** that **auto-clears ~70% of proposals at the first pass**, escalating only disagreed items to human review.

DashDeploy — Self-Hosted Deployment Platform [\[GitHub\]](#)

Jan 2026 – Mar 2026

- Built a self-hosted **Vercel-like** deployment platform using **Docker** and **k3s**, automating build, containerization, and **zero-downtime** deployment pipelines on **Hetzner Cloud** VMs across multiple nodes.

EDUCATION

Kookmin University — B.S. in Software Engineering • GPA: 4.04 / 4.5

Expected Feb 2028

SKILLS

Backend & Servers C#, C++, Python, Java • ProudNet, FastAPI, Flask • MySQL, PostgreSQL, Redis, MongoDB

Frontend React, Next.js, TypeScript, HTML/CSS, Tailwind CSS

AI & LLM Claude Code, Codex, Gemini, OpenAI API, multi-agent systems, AI automation, prompt engineering

Infra & DevOps Docker, k3s/Kubernetes, Hetzner Cloud, AWS (EC2, Lambda), GitHub Actions, Linux

Additional Unity (C#), PyQt, Selenium
