

MINTAE KIM

Irvine, CA • mintae3827@gmail.com • 949-735-4720 • [LinkedIn](#) • [GitHub](#) • [Website](#)

Software engineer who ships products end to end, from backend and infrastructure to web frontend, with LLM agent pipelines and Claude Code/MCP as a core part of how I build.

PROFESSIONAL EXPERIENCE

Funigloo — Game Server Developer [\[Notion\]](#)

Jan 2024 – Feb 2026

- **Architected a new MMORPG backend from the ground up** in C# with ProudNet, now ready to ship, and ran it with real players during a **4-day public showcase at G-STAR Busan**.
- Built a **6-server architecture** (Auth, Game, Guild, Log, Control, GM) for **fault isolation**, independent scaling, and **structured event logging** via a dedicated Log server.
- Implemented **fault recovery** that migrates players to a healthy server on failure and fails work over to another thread when a worker thread dies.
- Engineered a **zone-partitioned threading model** across 10 worker threads to remove resource contention, with cross-server sync via master-server routing and P2P UDP hole punching.
- Designed the broadcast cache architecture, raising single-map capacity from **250 to 600 players** and load-testing **50,000 concurrent connections** via parallel bot clients.
- Partitioned and indexed the game database and tuned **Redis caching** to keep query latency low on real-time gameplay paths.

PROJECTS

Fastlane — AI Evaluation Platform [\[Website\]](#)

Jan 2026 – June 2026

- Built and deployed an AI evaluation platform **end-to-end**, owning the **relational schema, REST API, scoring pipeline, and UI** from spec to production (Next.js, Supabase, OpenAI).
- Designed a **3-pass LLM scoring pipeline** (Draft → Skeptic → Judge) with σ -based dispute routing that auto-clears **~70% of proposals**, treating LLM output as untrusted until cross-validated.
- Added a **rule-based quality gate** (zero LLM cost) before scoring, and ran scoring as **async background jobs** so long LLM batches never block the user-facing flow.

Last Ember — AI-Built Card Game [\[Steam\]](#)

Apr 2026 – June 2026

- **Shipped a roguelike card game in Unity to Steam**, building the card system, turn-based combat, deck-building, and reward loops, with **44 copies sold and 250+ wishlists** to date.
- Built a reusable AI content pipeline of **custom Claude Code skills and MCP integrations**, generating **2,000+ shipped assets** (art, UI, animations) from card definitions with GPT Image 2 and Nano Banana under human review.
- Automated cinematic trailer generation via a **Higgsfield + Claude MCP** integration.

MarketWatch — Marketplace Monitoring App [\[GitHub\]](#)

2023

- Built, shipped, and **sold to 10+ customers** a PyQt5 desktop app that polls marketplace listings and emails **real-time alerts** when new items match a saved keyword and price range (Python, Selenium, PyQt5).
- Engineered a **background scraping thread** (QThread) with listing-ID dedup and configurable polling, decoupling the crawl loop from the UI for a responsive interface.

EDUCATION & CERTIFICATIONS

Kookmin University — B.S. in Software Engineering • GPA: 4.04 / 4.5

Expected Feb 2028

AWS Certified Solutions Architect – Associate (SAA-C03) [\[Credly\]](#)

Expires Jul 2029

SKILLS

Backend & Servers C#, C++, Python, Java • ProudNet, FastAPI, Flask • MySQL, PostgreSQL, Redis, MongoDB

Infra & DevOps Docker, Kubernetes (k3s), AWS, Hetzner Cloud, GitHub Actions, Linux

AI & LLM Claude Code, MCP, custom skills/agents, OpenAI API, PyTorch, Hugging Face Transformers, Unsloth, QLoRA/LoRA

Frontend React, Next.js, TypeScript, HTML/CSS, Tailwind CSS

Additional Unity (C#), PyQt, Selenium
